

E-Commerce Sales Analytics Project - Results

Project Overview

This project analyzes e-commerce sales data to identify revenue trends, top-performing products, customer behavior, and category performance.

Tools Used

- MySQL
- Power BI
- Excel
- GitHub

KPI Summary

Metric	Value
Total Revenue	[Insert Result]
Total Orders	[Insert Result]
Total Customers	[Insert Result]
Average Order Value	[Insert Result]

Sales Analysis

Monthly Revenue Trend

SQL Query Used

Monthly Revenue Trend Query

Findings

- Revenue varied across different months.
- Peak sales occurred during [Month].
- Lowest sales occurred during [Month].

Business Recommendation

Increase marketing campaigns before high-performing months to maximize revenue.

Product Analysis

Top 10 Products

Findings

- Product X generated the highest sales volume.
- Product Y generated the highest revenue.
- Top 10 products contributed significantly to total sales.

Business Recommendation

Maintain inventory levels for high-performing products and promote similar products.

Revenue by Category

Findings

- Electronics generated the highest revenue.
- Furniture ranked second in total revenue.
- Some categories showed lower profitability.

Business Recommendation

Focus marketing efforts on high-performing categories while evaluating underperforming categories.

Customer Analysis

Top Customers

Findings

- A small group of customers contributed a large share of revenue.
- High-value customers can be targeted for loyalty programs.

Business Recommendation

Introduce customer retention and reward programs for top-spending customers.

Orders by State

Findings

- Most orders originated from a few key states.
- Geographic concentration presents opportunities for targeted marketing.

Business Recommendation

Increase advertising spend in high-performing regions.

Key Insights

1. Revenue is concentrated in a few product categories.
 2. A small number of customers drive a significant portion of sales.
 3. Sales performance changes throughout the year.
 4. Certain regions contribute more orders than others.
 5. Top products account for a large share of overall revenue.
-

Conclusion

This analysis identified opportunities to improve revenue, customer retention, and product performance. The insights can help business stakeholders make data-driven decisions regarding inventory planning, marketing strategy, and customer engagement.
