

E-Commerce Sales Analytics Dashboard - Results

Project Summary

This project analyzes e-commerce sales data using MySQL, SQL, Power BI, and DAX. The objective was to identify sales trends, customer behavior, product performance, and profitability insights through interactive dashboards.

Dataset Overview

Table	Records
Customers	1,000
Products	200
Orders	5,000
OrderDetails	10,000

Key Performance Indicators

KPI	Value
Revenue	\$696M
Profit	\$209M
Total Orders	5K+
Active Customers	1K+
Average Order Value (AOV)	\$139K

Customer Insights

- Identified top-performing customers based on revenue contribution.
- Analyzed customer distribution across states.
- Measured customer growth trends using monthly active customers.
- Created customer segmentation analysis for business decision-making.

Findings

- A small group of customers contributed a significant share of total revenue.
 - Customer activity remained consistent across multiple regions.
-

Product Insights

- Analyzed product sales performance across categories.
- Identified top-selling products by revenue and quantity sold.
- Compared product revenue against profitability.

Findings

- Books emerged as the highest-performing category.
 - Several products generated high revenue but lower profit margins.
 - Category-level analysis helped identify profitable product segments.
-

Revenue Analysis

- Evaluated monthly sales trends.
- Measured revenue growth against previous periods.
- Analyzed state-wise revenue contribution.

Findings

- Revenue exceeded \$696M during the analysis period.
 - Revenue growth remained positive across key periods.
 - Certain states contributed significantly more revenue than others.
-

Profitability Analysis

- Calculated profit and profit margin using DAX measures.
- Compared profit across categories and products.

Findings

- Overall profit exceeded \$209M.
 - Profit margins remained healthy across major categories.
-

Dashboard Pages

1. Executive Dashboard

- Revenue KPI
- Profit KPI
- Orders KPI
- Customer KPI
- Revenue Trends
- State Analysis

2. Customer Analytics Dashboard

- Active Customers
- Revenue Per Customer
- Customer Segmentation
- Top Customers Analysis

3. Product Analytics Dashboard

- Top Products
- Category Performance
- Quantity Sold Analysis
- Revenue vs Profit Analysis

4. Business Insights Dashboard

- Executive Summary
- Revenue Insights
- Customer Insights
- Product Insights
- Business Recommendations

Tools Used

- Power BI
- SQL

- MySQL
 - DAX
 - Excel
-
